

Annexure No.:

EXPERIMENT- 07Aim: Buzzer Alarm system using Arduino.Appartus :

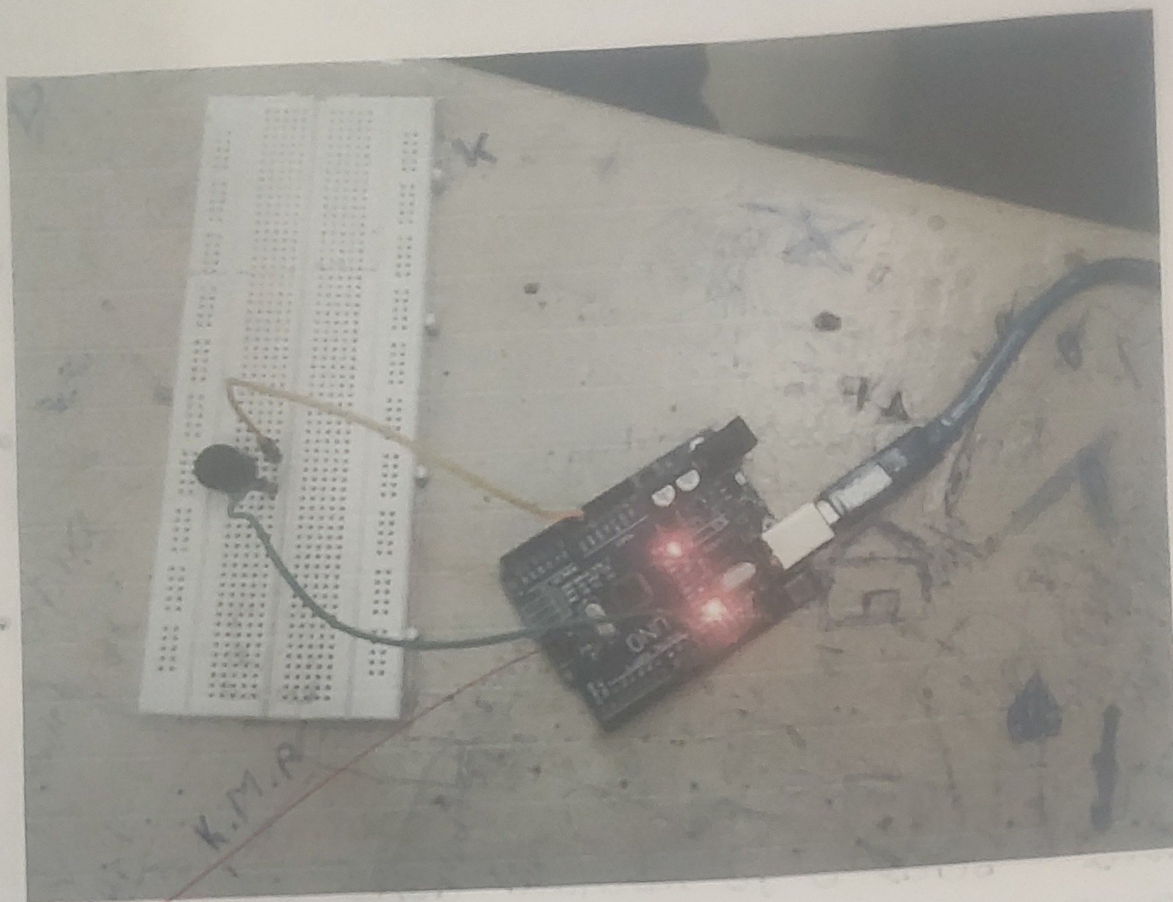

Arduino UNO, Buzzer, push button, BreadBoard, wires, resistor, USB cable, Arduino IDE.

theory :About Buzzer

The Buzzer are used to generated sound, beep or even melody of a song, They come in serveral types. catagorized by distinct characteristics. Let's explore these categories based on the following characteristics.

- Control Method.
 - Active Buzzers
 - Passive Buzzers
- Sound-Generating Mechanism.
 - Piezo Buzzers
 - Regular Buzzer
- Operating voltage :
 - Low voltage (3-5V)
 - High Voltage (12V)

Performance Result:

K.M.A

EXPERIMENT-01

Annexure No.:

CODE :

```
int buzzer = 8;
void setup()
{
    pinMode (buzzer, OUTPUT);
}
void loop()
{
    digitalWrite (buzzer, HIGH);
    delay (1000);
    digitalWrite (buzzer, LOW);
    delay (5000);
}
```

conclusion:

A buzzer alarm system using Arduino gives sound alerts based on input conditions. It helps in learning basic electronics and Arduino programming.
